

Fiberglass Pipe Installation Guide for SS Ends

478-279-2606

Handle with care. As the name implies, this is a **glass** product so please handle with respect. If product is dropped or damaged and “white spots” appear, contact Universal Fiberglass because the integrity of the product has been compromised and needs to be replaced.

Apply the **Chesterton 785 anti-seize** we provided to the stainless steel pipe nipple and inside pipe coupling to help prevent galling.

Never place a chain wrench directly on the fiberglass. Place the back-up wrench on the coupling and the tightening wrench on the stainless pipe nipple above the threads. We recommend a Ridged WA36 or larger chain wrench.
